

living

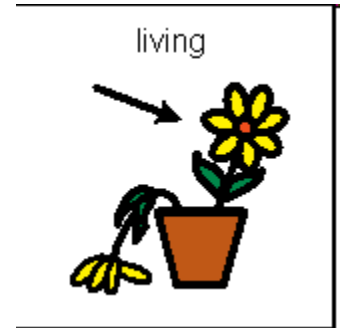

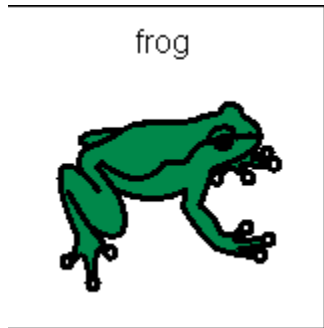

nonliving

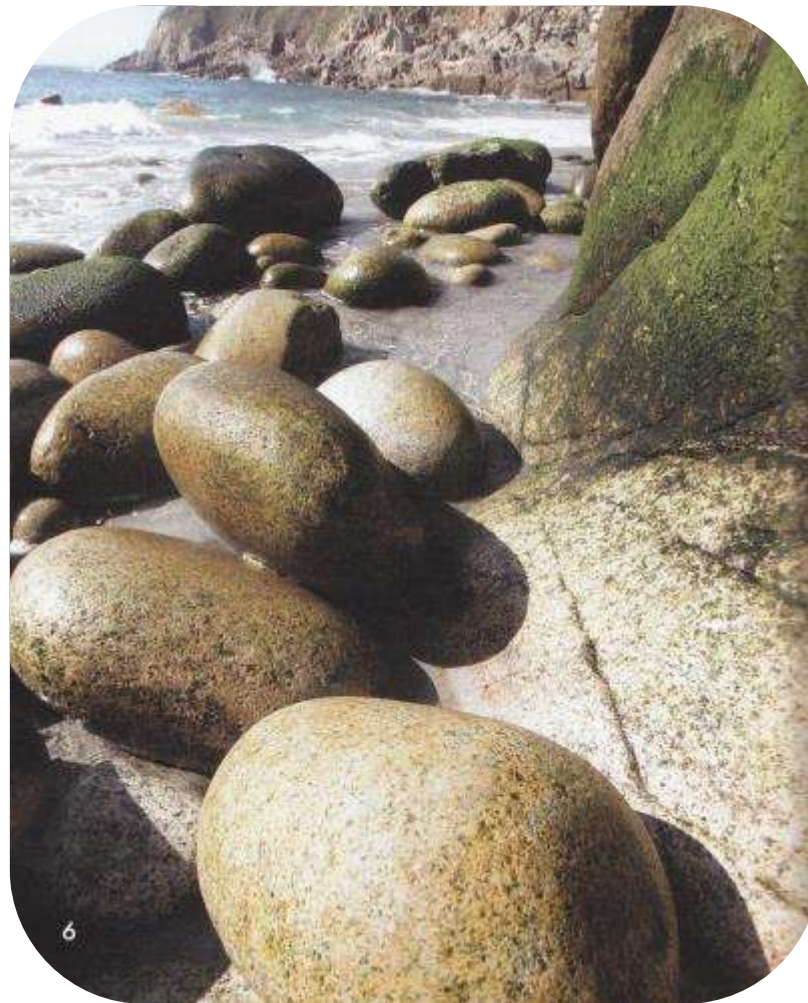

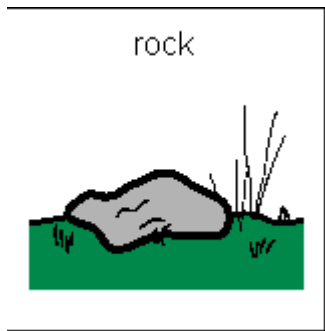

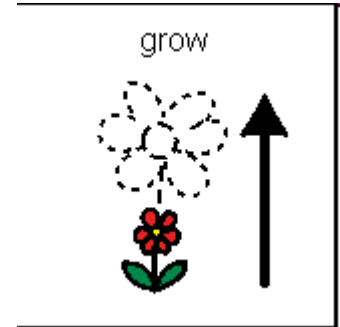

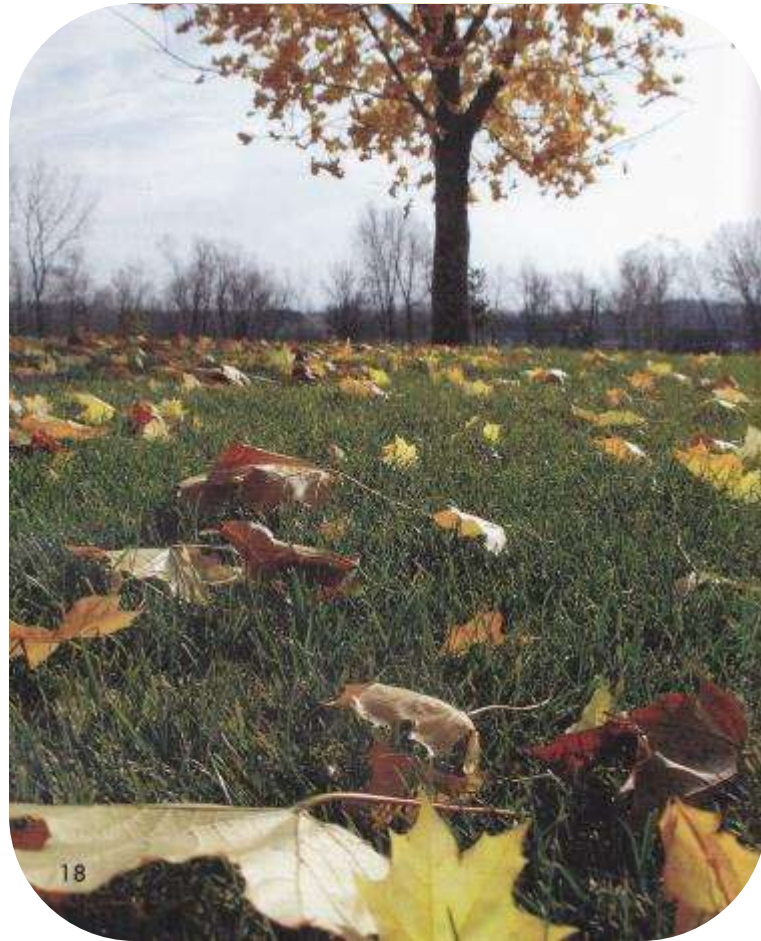

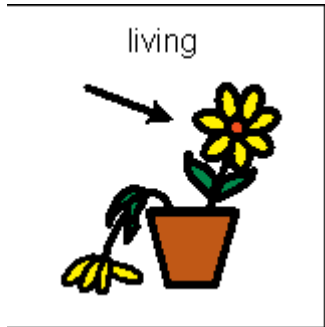

The **world** is full of **living** and **nonliving** things.

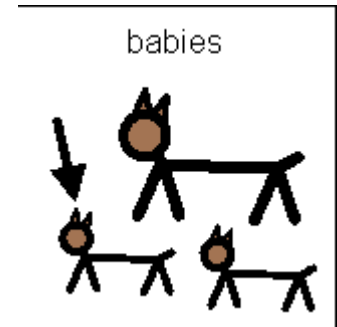

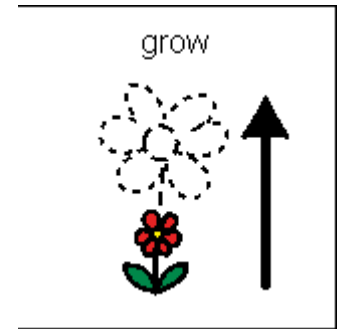

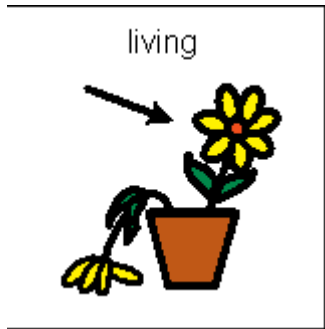

Frogs are **living** things.

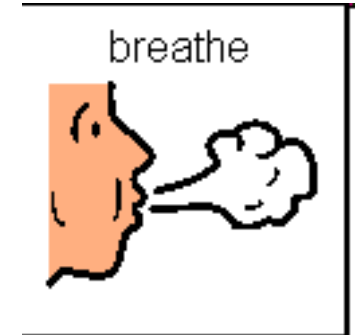

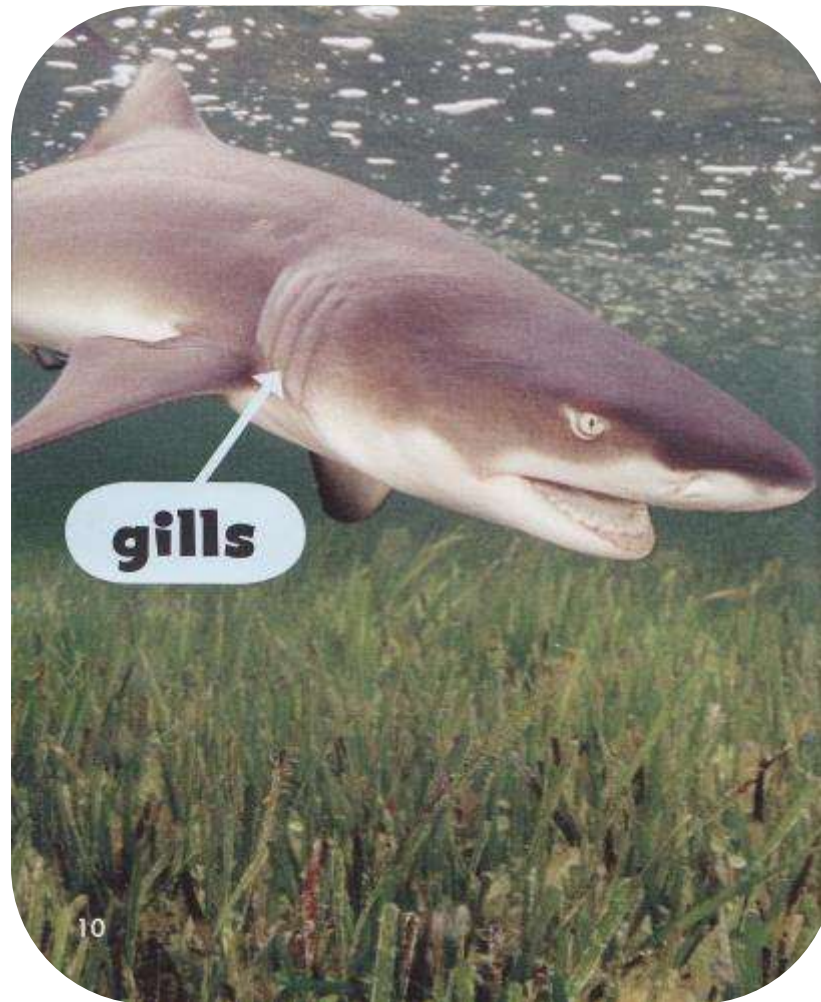

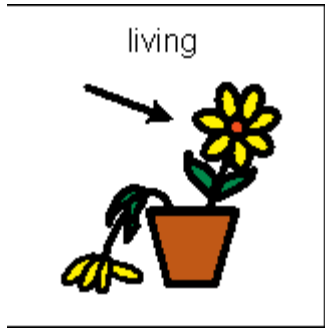

Rocks are **nonliving** things.

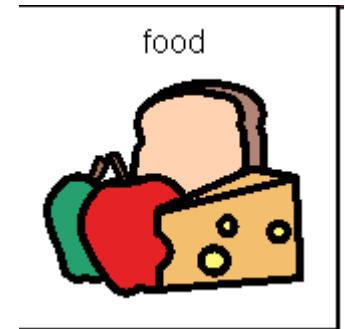

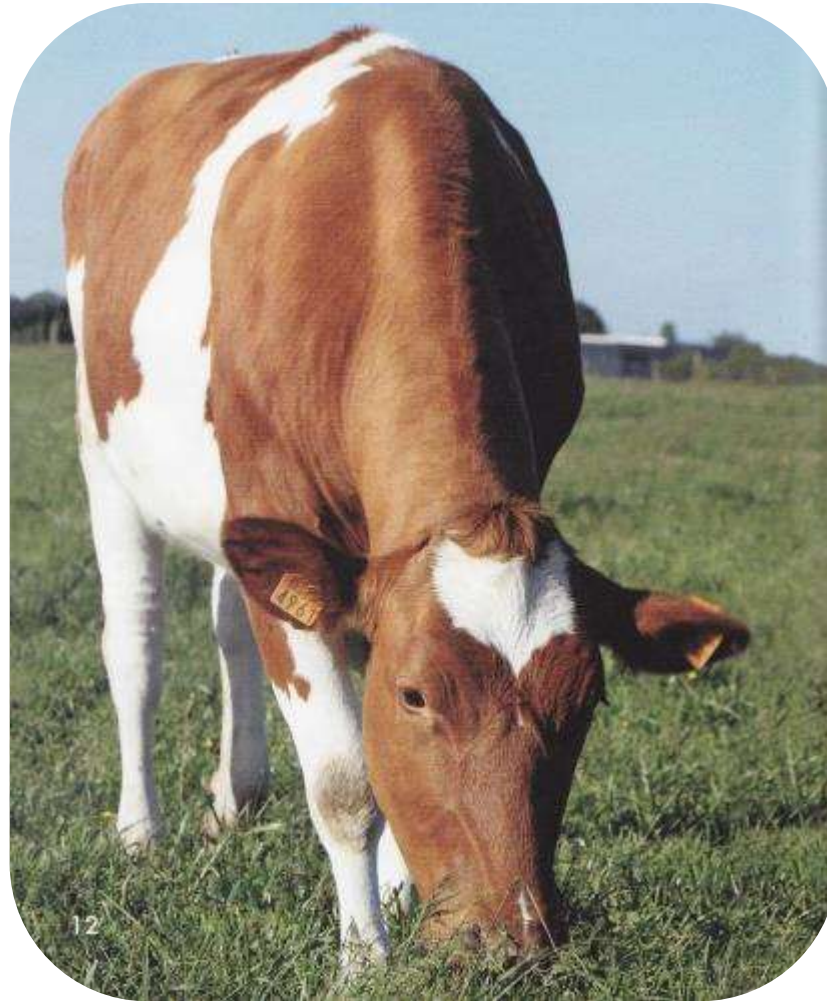

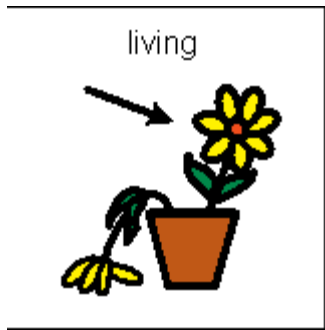

Living things grow older and change.
Leaves grow and change colour.

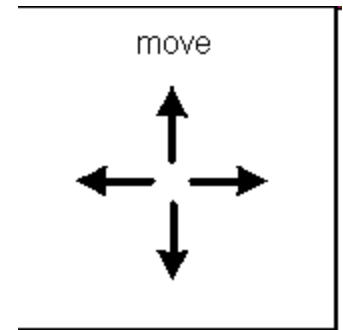

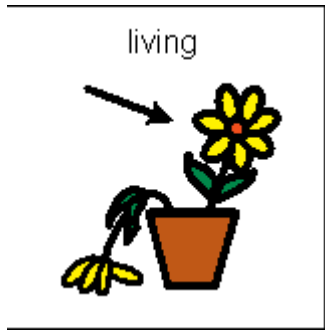

Living things **grow** and have **babies**.
These ducklings will **grow** as big as their mother.

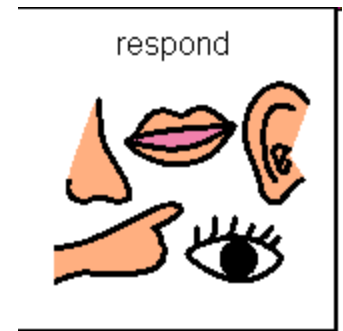

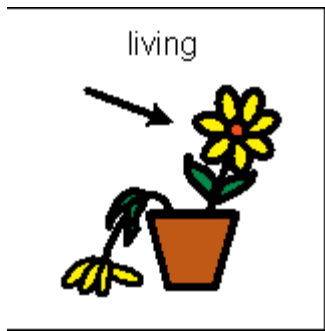

Living things **breathe**.
This shark **breathes** through its gills.

Living things eat **food** and drink **water**.
Cows eat grass and drink water.

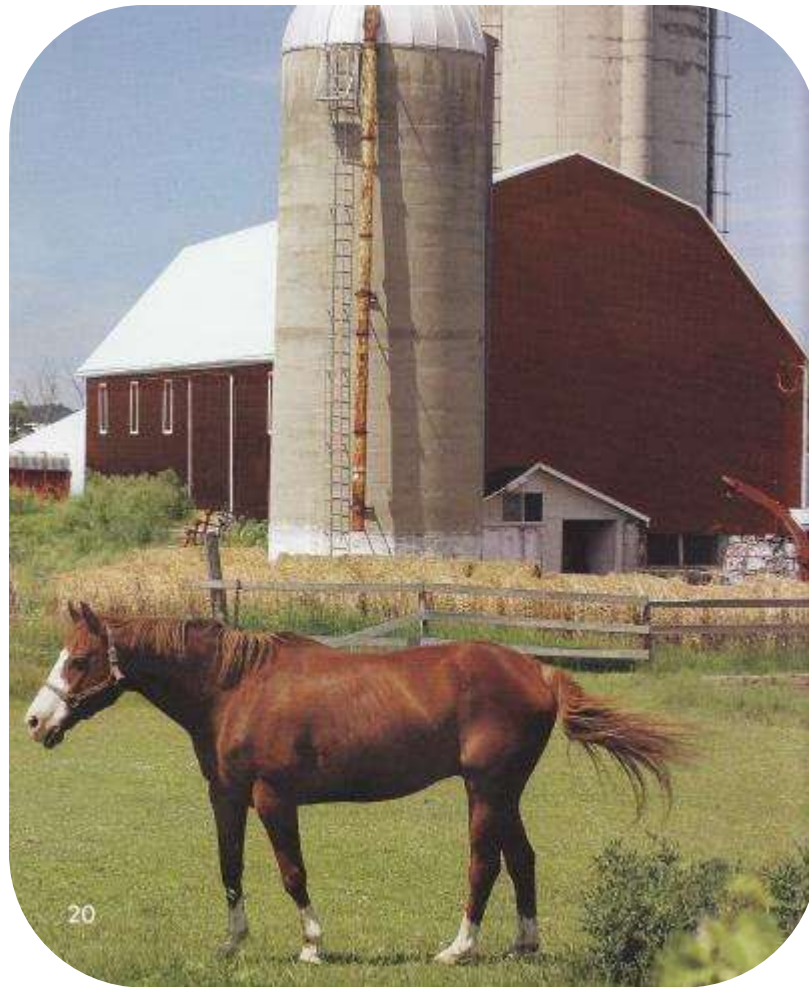

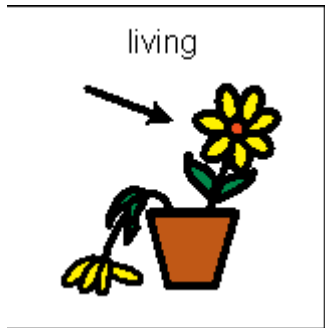

Living things **move** on their own.
Flowers turn toward sunlight.

Living things **react** to **changes** around them.
This dog is chasing the ball.

I breathe, eat, drink, grow and move.
I am a living thing.

The **world** is full of **living** and **nonliving** things.
Can you see some **living** things in this picture?
